INSTRUCTIONAL MODELS DECISION CRITERIA ASSESSMENT TOOL
As of August 19, 2020

BACKGROUND INFORMATION

In Shawano and Menominee Counties, COVID-19 has been with us for a while now and we still are learning and adapting. Shawano-Menominee Counties Health Department understands the struggle for schools to make decisions on when school should be held in person and when school should be more virtual. There are many situations to consider when making the decision about school learning methods. We definitely want to protect as many students and teachers and families as possible with these decisions. This is a tool to help you review factors that could show the risks for COVID-19 are increasing. Please note that it is not recommended to use only one criteria to make a decision to switch to complete virtual school. It may be best to look at multiple factors for these decisions. This is a tool to help you assess the situation.

Shawano-Menominee Counties Health Department would like to work with schools to help you find the current status for some of these criteria. Some data may be available through the Wisconsin Department of Health Services. Some data may be available from the health department and will be displayed on the health department's website. Some data may be available from the school. The health department hopes to provide tools, such as the School Surveillance System, to help schools collect this additional data if they would choose to do so. When available, links to the data source are provided.

HOW TO USE THE TOOL

The type of criteria is provided at the left. Additional notes may be included. If a source of data is available, it is linked there. The Targets/Benchmarks section shows what the best expectations would be for the criteria indicated. The Interpretations section shows the level of risk or the options for whether criteria is met or unmet. The items marked in lighter color may show lower risk while items in darker color may show higher risk. Current status would be where you could plug in the current interpretations based on available data. The more status items that would be the darker color, the higher the risks for in person instruction at the time.

If at any point in the school year you are concerned about your school's risks, whether risks have increased, or if you would like to discuss the risks, please call the Shawano-Menominee Counties Health Department. Please note that this information or data/surveillance information that is available may change at any time based on update or availability.
